

Disassembly Instructions for Recycling

Table

Martela tables are designed to be used in their original use as long as possible and each product family is tested according relevant EN standards to verify at minimum ten year use-life for the product before product is released for sales. Martela recommends maintaining the usability of the product by monitoring the tightness of the mechanical joints.

Martela tables can be demounted into components without special tools to enable component reuse and secondarily material recycling when the product has reached its full lifetime. Dismantling is possible with commonly used simple manual tools except apply to constituent components such as wood fiber, glue and laminate in panels.

Tools Required

- Protective glasses
- Utility knife
- Scissors
- Hammer/Sledgehammer
- Phillips screwdriver
- Chisel head screwdriver
- Torx screwdriver
- Hex wrench
- Pliers
- Magnet

Table

Martela

Sit and stand tables

Product Series like Pinta, Frankie, etc

Disassembly instructions

Disassemble only to the point that materials need to be separated for recycling or proper disposal. More detailed information on the structure and materials can be found in product specific drawings, which you can request at export@martela.com, kundeservice@martela.no (Norway) or info@martela.se (Sweden).

- Turn the table and remove all electronic components from the table top. Do not open plastic covers of the electronic components, but handle them as WEEE waste
- Remove all visible fasteners that secure the base to the table top
- Remove all the plastic glides and other parts from metal components
Sort the removed components according to the material according to the instructions of the local recycling system

Typical materials by component type

Steel	base, frame (magnetic)
Aluminum	base, frame (non-magnetic)
Zinc	hardware (non-magnetic)
Wood	table top
Nylon	plastic insert
Polypropylene	glide
